SUBJECT INDEX

accelerator coil, 371
accelerator
  coaxial, 1, 371
  electromagnetic, 1, 371, 671
  electrostatic, 381, 561
  electrothermal, 371
  explosive, 681
  explosive gun launcher, 357
  hypervelocity shotgun, 703
  induction, 671
  light-gas gun, 181, 561, 613
  particle, 561
  pellet, 681
  piston-driven, 181
  plasma gun, 371, 381, 561, 663
  powder gun, 181
  railgun, 1, 371, 635, 671
  reference gun, 181
  shaped charge, 681
acoustic impact detector, 371
adiabatic expansion--see expansion
adiabatic shear, 33, 269, 577, 585
advection, 423
alluvium target, 543
alumina, 165
aluminum alloy projectile, 323
aluminum oxide target, 173
aluminum rod, 585
aluminum
  equation of state, 129, 441, 603
  projectile, 61, 155, 221, 239, 307, 411, 509, 543, 577, 585, 635, 693, 729
  target, 61, 155, 165, 173, 221, 239, 249, 307, 381, 501, 509, 561, 577, 693, 709
  yield strength, 69
Alvarez hypothesis, 1, 13,
amplification factor, 33
andesite, 655
antiballistic missile, 1
arbitrary Lagrangian-Eulerian (ALE), 423
armature
  efficiency, 635
  plasma, 635
  solid metallic, 635
armor piercing projectile, 709
armor/antiarmor, 1, 709
artificial viscosity, 33, 181, 261, 423
asteroid impacts, 525
asteroids, 343
atmospheric effects, 525, 569
average atom theories, 69

ballistic disc, 681
ballistic limit, 221, 307
ballistic pendulum, 389, 613
ballotting, 635
band theory, 69
barrel
  Lucite, 501
  material, 357
base pressure, 181
Bauer gauge, 205
Bauschinger effect, 69, 603
Bernoulli's relation, 101, 277, 307, 323
beryllium
  equation of state, 603
  yield strength, 69
biaxial strain loading, 205
blast tank, 613
boost-glide, 1
bow shock, 525
break valve, 181
breakout phase, 101
breakup, 285, 451,
Brinell Hardness, 239, 307
brittle failure, 33, 493
brittle target, 221
bumper plate, 221, 451, 595
bumper shield--see meteoroid bumper shield

CONTENTS BY SUBJECT CATEGORY

PREFACE	i	
		SYMPOSIUM KEYNOTE
Harry Fair	1	Hypervelocity then and now
		EXPERIMENTAL TECHNIQUES
		Launchers
A. C. Charters	181	Development of the high-velocity gas-dynamics gun
Alex B. Wenzel	681	A review of explosive accelerators for hypervelocity impact
William F. Weldon	671	Development of hypervelocity electromagnetic launchers
M. M. Tower, G. L. Jackson, L. K. Farris and C. H. Haight	635	Hypervelocity impact testing using an electromagnetic railgun launcher
J. E. Osher, H. H. Chau, G. R. Gathers, R. S. Lee and R. C. Weingart	501	Application of a 100-kV electric gun for hypervelocity impact studies
A. E. Williams	703	A new hypervelocity shotgun
W. H. Holt, W. G. Soper and W. Mock, Jr.	357	Explosive gun launcher for impact studies
		Diagnostics
W. M. Isbell	389	Historical overview of hypervelocity impact diagnostic technology
L. C. Chhabildas	205	Survey of diagnostic tools used in hypervelocity impact studies
H. F. Swift	623	High-speed image-forming instrumentation for hypervelocity impact studies
Gary R. Hough	363	Hypervelocity impact visualization with a new Cranz-Schardin camera
M. B. Boslough	173	Shock-induced solid-state chemical reactivity studies using time-resolved radiation pyrometry
		Facilities
E. Igenbergs, S. Aigner, A. Huedepohl, H. Iglseder, H. Kuczera, M. Rott and U. Weishaupt	371	Launcher technology, in-flight velocity measurement and impact diagnostics at the TUM/LRT
A. J. Richards and A. V. B. Bowden	519	The development of a projectile velocity measuring system for the RARDE No. 2 hypervelocity launcher
A. J. Stilp	613	Review of modern hypervelocity impact facilities

NUMERICAL TECHNIQUES

Charles E. Anderson, Jr.	33	An overview of the theory of hydrocodes
Wallace E. Johnson and Charles E. Anderson, Jr.	423	History and application of hydrocodes in hypervelocity impact
Gordon R. Johnson and Robert A. Stryk	411	Eroding interface and improved tetrahedral element algorithms for high-velocity impact computations in three dimensions
Ted Belytschko and Jerry I. Lin	111	A three-dimensional impact-penetration algorithm with erosion
W. J. Flis	269	Advanced algorithms for computer simulation of hypervelocity impact
John T. Harrison and Wallace E. Johnson	293	HOIL: A two stage, hydrodynamic, numerical scheme linking HEMP and SOIL

MATERIAL RESPONSE MODELING

J. R. Asay and G. I. Kerley	69	The response of materials to dynamic loading
G. I. Kerley	441	Theoretical equation of state for aluminum
R. L. Bjork	129	The physics of hypervelocity lethality
Kathleen S. Holian and Michael W. Burkett	333	Sensitivity of hypervelocity impact simulations to equation of state
T. G. Trucano and J. R. Asay	645	Effects of vaporization on debris cloud dynamics
D. S. Drumheller	261	Hypervelocity impact of mixtures
D. J. Steinberg	603	Constitutive model used in computer simulation of time-resolved, shock-wave data

ANALYTICAL TECHNIQUES

Walter Herrmann and James S. Wilbeck	307	Review of hypervelocity penetration theories
J. Baker and A. Williams	101	Hypervelocity penetration of plate targets by rod and rod-like projectiles
D. E. Grady	285	Fragmentation of rapidly expanding jets and sheets
John D. O'Keefe and Thomas J. Ahrens	493	The size distributions of fragments ejected at a given velocity from impact craters
K. Frank and J. Zook	277	Energy-efficient penetration and perforation of targets in the hypervelocity regime
James Dehn	239	A unified theory of penetration
R. Jeffery Lawrence	451	A simple model for the optimization of stand-off hypervelocity particle shields
George R. Spillman	595	A simple defense conservative model for mass requirements of hypervelocity projectile impact shields for reentry vehicles
Peter S. Westine and Scott A. Mullin	693	Scale modeling of hypervelocity impact
Keith A. Holsapple	343	The scaling of impact phenomena
Michael D. Bjorkman and Keith A. Holsapple	155	Velocity scaling impact melt volume
Robert M. Schmidt and Kevin R. Housen	543	Some recent advances in the scaling of impact and explosion cratering
Salvo E. Arione and Michael D. Bjorkman	61	Scaling flow fields from the impact of thin plates

PHENOMENOLOGY STUDIES

Space and Planetary Science Studies

Burton G. Cour-Palais	221	Hypervelocity impact in metals, glass and composites
P. H. Schultz	569	Experimental planetary impact research
Thomas J. Ahrens and John D. O'Keefe	13	Impact on the earth, ocean and atmosphere
David J. Roddy, Sheldon H. Schuster, Martin Rosenblatt, Lisa B. Grant, Paul J. Hassig and Kenneth N. Kreyenhagen	525	Computer simulations of large asteroid impacts into oceanic and continental sites--preliminary results on atmospheric, cratering and ejecta dynamics
A. M. Vickery	655	Effect of an impact-generated gas cloud on entrained surface boulders and spall ejecta
H. J. Melosh	483	High-velocity solid ejecta fragments from hypervelocity impacts
E. Schneider and A. Stilp	561	Micrometeorite impact simulation at EMI-a review
H. Iglseder and E. Igenbergs	381	Measured charge generation by small mass impact at velocities between 1 and 45 km/s
U. Weishaupt	663	Hypervelocity impact of small masses on large surfaces of piezoelectric ceramics
Andrew J. Piekutowski	509	Debris clouds generated by hypervelocity impact of cylindrical projectiles with thin aluminum plates
Ching H. Yew and Rodney B. Kendrick	729	A study of damage in composite panels produced by hypervelocity impact

Defense Related Studies

A. E. Williams and M. A. Persechino	709	The effect of projectile properties on target cratering
S. J. Bless, Z. Rosenberg and B. Yoon	165	Hypervelocity penetration of ceramics
David L. Dickinson, Jerome D. Yatteau and Rodney F. Recht	249	Fragment breakup
V. Hohler and A. J. Stilp	323	Hypervelocity impact of rod projectiles with L/D from 1 to 32
D. A. Shockey, D. R. Curran, J. E. Osher and H. H. Chau	585	Disintegration behavior of metal rods subjected to hypervelocity impact
William Lawrence and Robert E. Franz	463	Stress measurements in glass using shaped-charge jets
J. C. Schulz, O. E. R. Heimdahl and S. A. Finnegan	577	Computer characterization of debris clouds resulting from hypervelocity impact
R. W. Meier	471	Numerical simulations of small projectiles impacting a multilayered target at hypervelocities
